

MEASURING GUIDE / CHART

Before Measuring please note:

- You will need a steel measuring tape, pencil and paper.
- When measuring, round your measurement off to the nearest millimetre (mm).

- Note: Standard Size Blinds will be supplied with the exact width as listed on our size chart and the drop approximately 10 to 20mm longer (i.e. an additional working slat is included). The additional slat can be used to increase the useable length of the blind or alternatively as a replacement slat, should one become damaged in the future.
- Cut to Size Blinds will be supplied using the measurements you supply.

Step 1

- Decide whether you want the blind to be an **“Inside Fit”** (Go to step 2a)

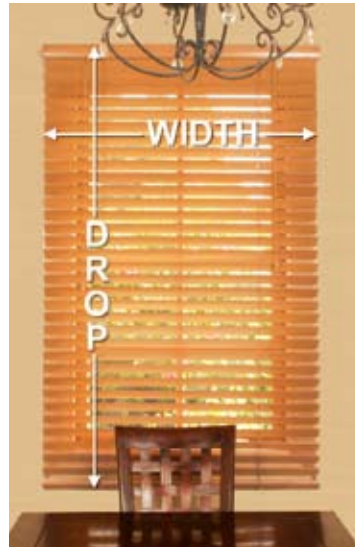

Step 2a •

For an **“Inside Fit”**
If you decide you want the blind to be an “inside fit” using your tape measure, measure the “width” first (wood to wood), then the “drop” (wood to wood) and then write down the sizes. *(Please ensure you give us your exact measurements as we will take the necessary deductions off these sizes to allow the blind to pull up and down without rubbing on the window frame).*

*TIP: If you decide you want the blind to be an **INSIDE FIT** It's a good idea to measure the width in three places. At the **top**, in the **middle** and at the **bottom** of the window - **record and order the narrowest of these measurements.***

INSIDE FIT (2a)					
WINDOW Location	WIDTH (mm)			DROP (mm)	Qty
	Top	Middle	Bottom		
Freight: FREE delivery Nationwide					

- or an **“Outside Fit”** (Go to step 2b)

Step 2b •

For an **“Outside Fit”**
If you decide you want the blind to be an “outside fit” we suggest measuring to the outside of the architrave to minimize light gaps and to obtain maximum privacy. *(For “outside fit” blinds, we do not make deductions from the sizes that you provide as this is unnecessary).*
If you have no architraves, we recommend adding 200mm to the window width measurement (100mm for each side) and 100mm to the drop measurement (to ensure coverage beyond the window sill).

OUTSIDE FIT (2b)			
WINDOW Location	WIDTH (mm)	DROP (mm)	Qty
Freight: FREE delivery Nationwide			

Step 3

- Compare your measurements to the list of standard sizes available, (visit www.readymadeblinds.co.nz and click on our “Product Range” to view list) then either choose the Standard Size Blind that suits your measurements the best, or for a more finished appearance, choose a blind slightly larger than your measurements and ask us for the blind to be Cut to Size.

Step 4

- If you ask for a blind to be Cut to Size simply provide us with your measurements by following the Steps above and we will cut the blind to suit your measurements. *(re-sizing costs apply).*

IMPORTANT: The accuracy of your measurements is essential for a correct and proper fit of your blinds. We cannot be accountable for inaccurate measurements, so if you have any doubts always be sure to double check before placing your order. As a further safeguard we will always phone you prior to proceeding with your order. Therefore please ensure that you provide us with a day-time contact phone number.
